

Organ-Gland Targeting Without Animal Glandulars

- Clinically proven organ and gland support using synergistic nutraceutical complexes which provide pinpoint-targeting to specific organs and glands
- No risk of prions from commercial glandulars; prions are the infective agent of human spongiform encephalopathy causing brain wasting (“Mad cow disease” has now been identified in the U.S. beef supply)
 - No synthetic hormones, pesticides or toxic chemicals as found in commercial glandulars
 - No pre-formed arachidonic acid as found in animal glandulars which promote inflammation
 - No death hormones as found in commercial glandulars

Quantum Adrenal Complex (500 mg.) 60 Vcaps
Optimal cleansing, detox & nutritional support for the adrenals. Supports deeper more restful sleep, ideal respiratory function, better libido, healthy blood sugar regulation, increased energy, best mood and memory function, healthy kidney performance and strengthened spleen function - clinically proven to deliver rapid improvement in cellular health*

Quantum AllerCleanse (500 mg.) 30 Vcaps and 90 Vcaps
Nutraceutical hypersensitivity formula; thymus, liver, adrenal/intestinal support and detox*

Quantum Bladder Complex (500 mg.) 60 Vcaps
Nutraceutical urinary tract/bladder formula; ideal support/detox for urinary bladder*

Quantum Bone and Joint Complex (500 mg.) 60 Vcaps
Anti-porosis bone builder; support for healthy bones, joints, flexibility, strength*

Quantum Brain Complex (474 mg.) 60 Vcaps
Brain nutraceutical formula; critical nutrients to support brain & nerve function, memory and clarity. Includes phosphatidyl serine, choline, inositol and ethanolamine plus ginkgo (brain circulation) and hericium (nerve rejuvenation)*

Quantum Brain Tea (500 mg.) 60 Vcaps
Nutraceutical brain formula; promotes enhanced brain function, memory, clarity, concentration & focus*

Quantum Eye Complex (500 mg.) 60 Vcaps
Eye nutraceutical formula; advanced support for clear, strong vision and healthy eyes, including macula, retina and lens, includes a whopping 6,000 mcg zeaxanthin (natural source) and 3600 mcg lutein (natural source)/Vcap*

Quantum Gallbladder Complex (500 mg.) 30 Vcaps
Nutraceutical gallbladder formula; superior gallbladder support/cleansing; used in Mini-Liver Flush*

Gallbladder Nano-Detox (8 fl. oz.)
Nanized gold coin tincture; deep-seated gallbladder cleansing/detox, also used with Liver/Gallbladder flush*

Quantum Heart Complex (495 mg.) 30 Vcaps
Nutraceutical heart support formula; targets nutrients to heart; artery, circulation, blood support*

Heart Nano-Detox (8 fl. oz.)
Nanized nutraceutical tincture; promotes healthy heart, circulation and clean arteries; highly bioavailable*

Quantum Kidney Complex (500 mg.) 60 Vcaps
World-class nutraceutical kidney formula; superior kidney support featuring Agaricus bisporus and Cordyceps sinensis with other synergists and co-factors; over 5,000 years of Chinese medicine has proven that the main strength in the body lies in the kidneys (energetically speaking); Agaricus bisporus, the “kidney powerhouse, helps dramatically boost kidney function and purify the blood*"

Quantum Liver Complex (450 mg.) 60 Vcaps
World-class 15-herb formula for superb liver support/detox featuring grade 10 milk thistle, Brazilian Pau D'Arco, Indian turmeric, Citrus aurantium, Grade 10 fermented mycelial extracts with co-factors and synergists; also used in Mini-Liver Flush*

Liver Nano-Detox (8 fl. oz.)
Nanized, grade 10 Indian turmeric tincture; promotes optimal liver cleansing and whole body DNA repair*

Quantum Lung Complex (500 mg.) 30 Vcaps
World-class nutraceutical lung formula; powerful broad-spectrum phytonutrients for unparalleled lung cleansing and support featuring premium-grade French Pine bark, beta-sitosterol, Coriolus versicolor, Indian Noni and more*

Quantum Nerve Complex (500 mg.) 60 Vcaps
Nutraceutical nerve formula; cutting-edge brain and nerve growth; promotes nerve rejuvenation*

Quantum Nucleotide Complex (500 mg.) 60 Vcaps
Highly bio-available nano-proteins (DNA/RNA); promotes rapid cellular rejuvenation, increased vitality and regeneration; thymus, intestinal, immune support/booster; cold and flu season support*

Quantum Pancreas Complex (500 mg.) 60 Vcaps
World-class nutraceutical formula; pancreas, blood sugar, digestion, spleen support*

Quantum Prostate Complex (500 mg.) 60 Vcaps
World-class nutraceutical formula for superior prostate health*

Quantum Stomach Complex (500 mg.) 60 Vcaps
Incomparable, world-class nutraceutical formula for superior stomach support*

Quantum Thyroid Complex (500 mg.) 60 Vcaps
Nutraceutical thyroid formula; ideal support for thyroid metabolism, detox*

Is There Risk from Taking Nutritional Supplements with Bovine Organs and Glands?

Mad Cow Disease and Animal Organ/Glandulars

Mad cow disease is also known by its medical term: **bovine spongiform encephalopathy or BSE**. The human disease known as Creutzfeldt-Jakob disease or CJD – appears to have much in common with mad cow disease. About a decade ago, British researchers identified a new form of CJD - which they called new variant Creutzfeldt-Jakob or vCJD - that looked identical to the infection that caused BSE in cows. The identification of more than 100 human cases followed an epidemic of about 50,000 cases of BSE in cattle.

Prions. Both infections are believed to be caused by **prions**, which are tiny **microbe particles, smaller even than viruses**. Prions appear to contain only protein, thereby lacking the DNA that is required by most living organisms, leading scientists to question whether prions are really “alive.” In addition, prions **do not appear to be “killed” or inactivated by typical sterilizing techniques** such as heating or treatment with many types of germicides.

Sponge-like Holes. Once prions gain entry inside the human body, they can travel to the brain, where they are known to cause a **destructive process that can slowly fester over a period of up to 20 years, gradually infecting the brain, creating problems with cognition, memory and mood**. In the end, **the brain is left with numerous tiny, punctate holes**, much like Swiss cheese or a sponge (hence the name “spongiform”).

CJD Symptoms. Patients with classic CJD develop a variety of symptoms including a rapidly progressing **mood changes, muscle spasms, difficulty walking, hallucinations, loss of memory, dementia, uncontrollable crying or screaming, inability to speak or walk – typically leading to a gruesome, early death**. Once memory changes begin, most patients – typically over age 50 — die within a year. Compared to the classic form of the disease, patients with the mad cow-associated new variant CJD tend to be younger (an average age of about 30), have more psychiatric symptoms, and progress less rapidly. **There are no known treatments or cure** for either form of the disease, which has always been fatal.

How BSE prions travel from cattle to humans is unclear, but **the best evidence is that it comes from eating beef and beef products**. This situation is likely compounded by certain questionable practices within the cattle industry, including using ground-up beef entrails to fortify cattle feed - which is known to promote the spread of the disease.

In the early 1990s in England, British health officials cracked down on such practices following the outbreak of BSE and vCJD. However, in the U.S., the U.S. Department of Agriculture has neglected to impose and enforce protective measures or to screen more extensively for BSE in the U.S. Therefore, it is simply unknown how extensive BSE is in the U.S. and how many people have been affected.

US Companies in Violation. In late 2003, worldwide news reported that a total of **300 U.S. companies were in violation of federal regulations meant to prevent Mad Cow disease (BSE)**. The data came from the Food and Drug Administration’s own database of animal feed company inspection records. The number of companies violating the law was more than double the number listed by the FDA in April, 2002. **These regulations are meant to prevent cattle and other ruminant parts from being fed to cattle and other ruminants, a form of animal**

cannibalization once commonly practiced and now **considered most likely to spread Mad Cow disease**.

In November, 2003, world news reported that by using newer techniques, Swiss scientists were able to identify for the first time in human muscle tissue - a rogue protein implicated in the degenerative brain disorder, Creutzfeldt-Jakob disease (CJD). (See press release: “Rogue Agent in Creutzfeldt-Jakob Brain Disease Now Found in Muscle Tissue” Nov 6, 2003.)

In 1996, in response to the realization that young people in Britain were dying from variant Creutzfeldt Jakob Disease (vCJD), the human equivalent of mad cow disease, **the World Health Organization (WHO) issued seven “Recommendations.”** The first four recommendations were to reduce the likelihood of mad cow disease from ever spreading to human populations.[6] To the present day, according to Michael Greger, M.D. of the Organic Consumers Association, **the U. S. government continues to violate each and every one of these four guidelines**.

In the third recommendation in the WHO’s Guidelines, the WHO recommends that “Countries should not permit tissues that are likely to contain the BSE agent to enter any food chain, human or animal.”[92] Basically, this means **excluding cattle brains, eyes, spinal cord and intestine (from small intestine to rectum) from the human food supply**, and from all animal feed. Considering the very real risk of infection from these sources, Dr. Gregor feels outraged that the U.S. still allows these potentially risky tissues to be fed to people, pets and poultry. (See article, “U.S. Violates World Health Organization Guidelines for Mad Cow Disease.”)

Inducing Higher Cellular Resonance. However, the real purpose behind using animal organ and glandular tissue in nutritional supplements is to help improve the health of the individual. But is it necessary to use animal tissue to improve human tissue function?

First, the cellular resonance of any animal tissue *can never match* that of human tissue. In fact, if an animal has been fed a chemicalized diet (with antibiotics, synthetic hormones, etc.) as well as other dead animal remnants (a common practice in the US), then the cellular resonance of that animal tissue may stress and degrade human cellular resonance if consumed, even though the animal tissue may provide certain nutrients. In addition, there is the unnecessary risk of prion exposure and possible infection.

Recent advances in quantum physics have made it possible to now identify and measure the ideal cellular resonance of each human organ and gland. Over the last decade, Premier Research Labs has painstakingly searched for truly synergistic botanical and nutraceutical agents that most closely match the ideal cellular resonant frequency range of each human organ and gland.

We found that the only agents that worked were those that had been exquisitely well grown and harvested at their peak without any chemical contaminants and thus, contained an inherently high cell resonance frequency. Then, through intensive trial and error, we discovered how to combine these elegant, living-source nutrients to create formulas that matched the range of ideal cellular resonance for a specific organ or gland. Thus, these cell resonant-specific formulas promote the most rapid shift back to ideal cellular resonance and thus, best health.
